

“ISB is reimagining health care. Our **Scientific Wellness** platform will transform how we attain – and maintain – health.”

–Dr. Lee Hood
ISB co-founder

Scientific Wellness is the culmination of several foundational elements championed by Dr. Lee Hood.

Scientific Wellness embodies P4 medicine (predictive, preventive, personalized and participatory) and generates personal, dense, dynamic data clouds that assess an individual’s health. This highly personalized information sets a baseline for wellness, and can be used to identify and reverse disease transitions.

As a research affiliate of Providence St. Joseph Health, Scientific Wellness can be applied in clinical settings to explore diseases and help patients improve their health.

This is 21st Century health care.
